Filled system Thermometers

Outline

Indicating thermometers can be classified into liquid filled type, which use the expansion and contraction of the liquid sealed in the thermometer caused by temperature changes, and gas filled type, which uses changes in the pressure of the insert gas sealed in the thermometer caused by temperature changes. These thermometers are perfect for local indication of temperature because a power source is unnecessary and they are easy to see.

Features

- Since the sealed-in medium is a non-polluting organic liquid or an inert gas, the thermometer is environmentally friendly.
- A large variety of types matched to a wide range of environments and applications is available.

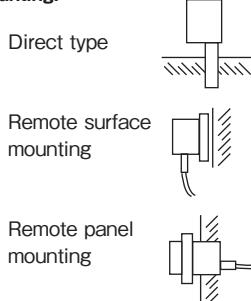

* When selecting the temperature range of a thermometer, select one which is normally used within a temperature range of 75% or less. Check to confirm that the material of the wetted parts is appropriate for the gas or liquid to be measured.

Specifications

Manufacturing temperature range:
-200°C ~ 600°C

Size:
φ 75, φ 100, φ 150

Mounting:

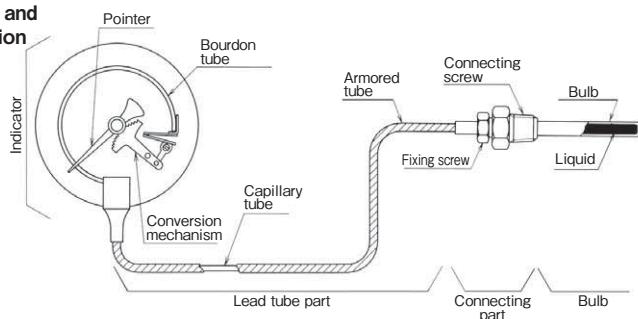

Bulb / Connection mounting:
SUS304

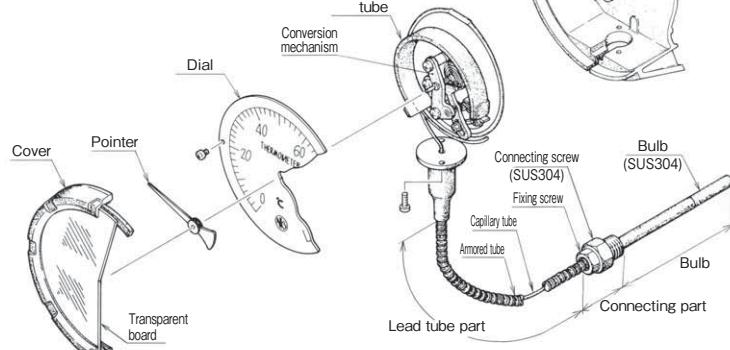

Lead parts material:

Capillary: SUS304 or SUS316
Armored tube: SUS430

Principles and Construction

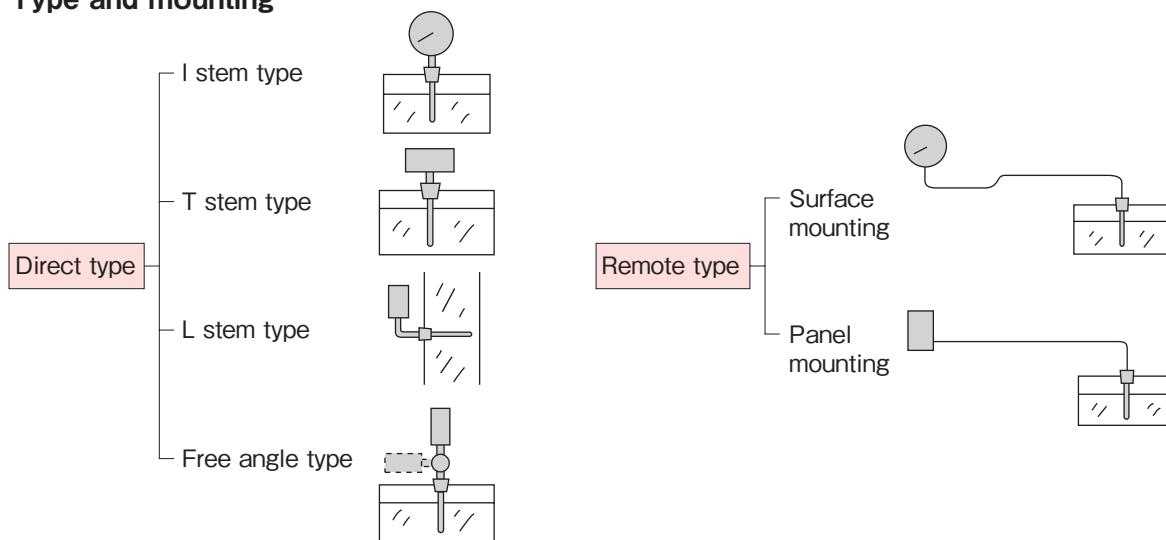

Sealed liquid is expanded and contracted due to a temperature change, the Bourdon tube is displaced. The displacement is transferred to the pointer which indicates the result on the dial.

Selection of the specifications of thermometers

1. Type and mounting

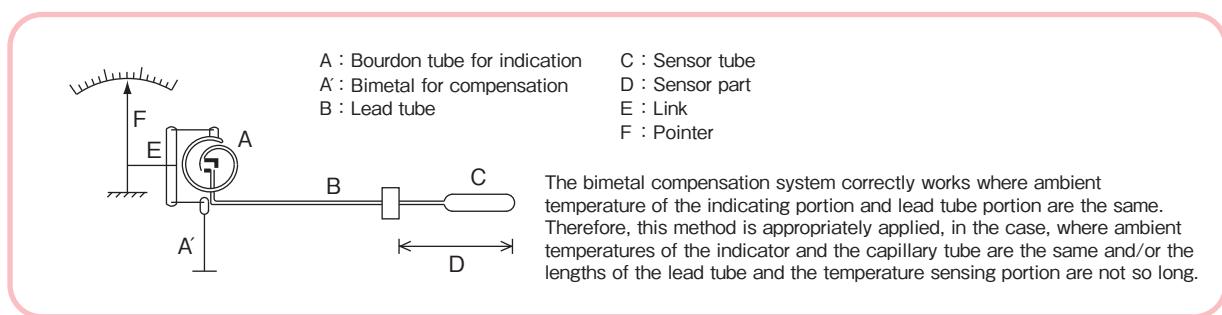

2. Compensation system by installation site

When the ambient temperature of a temperature gauges changed, the liquid sealed in the indicator and capillary tube of filled system thermometer expands or contracts and causes an indication error. To compensate for this error, the following compensation two systems are available.

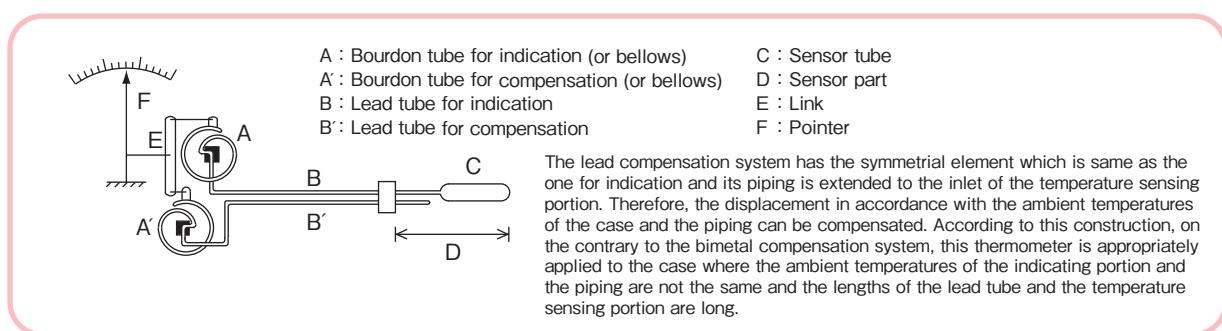

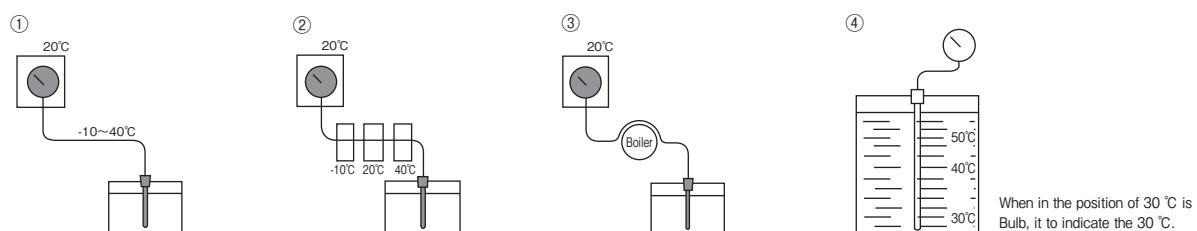

(1) Bimetal compensation

- When the temperature is changed in the same at the indicator and capillary tubes.

(2) Lead compensation

- ① When the temperature change around the indicator is very few and the temperature change around the capillary tubes is large and vice versa.
- ② When the capillary tubes are used under various ambient temperatures.
- ③ When a part of the capillary tubes is heated.
- ④ When measuring the liquid temperature in the tank with different temperature distribution. Or when the height of the liquid level changes.

Selection of the specifications of thermometers

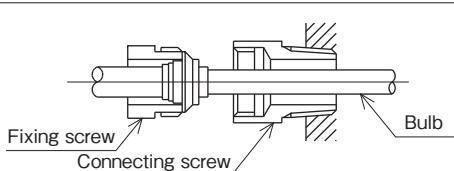

3. Temperature range (Scale range)

- The upper limit of the normal temperature should be selected temperature range to be 75% or less of the temperature span.
- The thermometers start measurement from the time of manufacture and are active even though the thermometer is not used.
- When the temperature exceeds the temperature range, it may cause the temperature gauge to break.
- If the gauges will cross the equator or pass through cold regions during shipment, or will be stored in a cold region, careful attention is required.

4. Mounting type of bulb

Union type

- Standard spec.

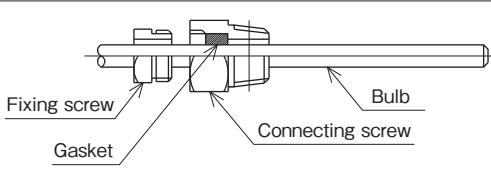

By tightening the fixing screw, the bulb is fixed to the connecting screws so that its position does not change.

Maximum allowable working pressure of union type is
Less than 200°C → 2MPa
Over 200°C → 1MPa
(If the pressure is higher than the above, a thermowell should be provided.)

Slide type

- When the bulb position must be adjusted due to changing of the position of the fluid to be measured in a tank or other vessel.
- When thermowell is provided or the bulb must be inserted all the way to the bottom.

By tightening the gasket with fixing screw, bulb can be fixed at any position.

Maximum allowable working pressure of slide type is 0.3MPa
(If the pressure is higher than the above, a thermowell should be provided.)

Plain type

- When a long bulb is inserted into the thermowell, it does not have to be fixed.
- Only remote type is manufactured.

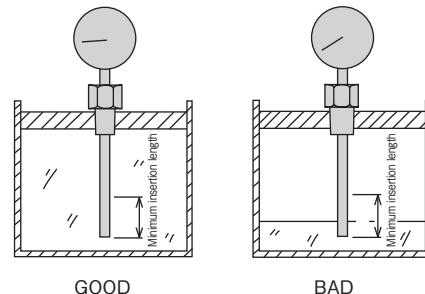

5. Bulb minimum insertion length

- The minimum bulb insertion length is decided according to the type, temperature range and bulb diameter. Decide the bulb length within the range between the minimum insertion length and the maximum insertion length. Make sure that the bulb is inserted into the liquid under measurement up to the screws, flange, or other connecting parts.

[Note]

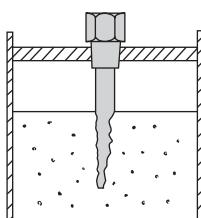

If the bulb is not inserted into the liquid under measurement up to the screws or flange, an indication error may occur.

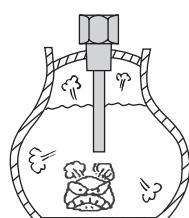

6. Thermowell necessary conditions

- For corrosive fluids, a thermowell made of a suitable material is necessary.
- For high pressure, a thermowell suited to the operating pressure must be used.
- When the fluid flows, a thermowell suitable for the flow speed must be used.
- When the fluid leaks when the thermometer is removed, a thermowell is convenient for maintenance.
- When the liquid in the thermometer leaks from the bulb and is harmful, a thermowell must be used.

● The above lengths are the minimum necessary of the bulb to be inserted into the fluid to be measured.
● Bulb length should be over the above length and specified in 5mm steps.

* The number () in the minimum scale is for TL43.

The above minimum insertion length is the length without thermowell.
With thermowell, 25mm is added to the above length.

● The above lengths are the minimum necessary of the bulb to be inserted into the fluid to be measured.

* The number () in the minimum scale is for TL73.

● Bulb length should be over the above length and specified in 5mm steps.

● φ75 are not available in the [] portion.

* 1 Bulb maximum dimension: Available up to 3000mm when φ10, 12, and 13, up to 1000mm when φ8, 16.

The above minimum insertion length is the length without thermowell.
With thermowell, 25mm is added to the above length.
The minimum length of the plain type bulb is the minimum length of the above table plus 40mm.

【Manufacturing range】

- Lead compensation 400 to 600°C not available.
- Lead compensation $\phi 75$ not available.
- Slide type is not available when the following conditions are true.
- Bulb: $\phi 16$
- When the maximum temperature of temperature range exceeds 400°C.

* When ordering, please specify the bulb length and lead length.

* The thermowell model composition is SW (13) (14).

* For with thermowell, please refer to P (16) ~thermowell manufacturing specifications and specify the SW model also.

*Specify "X" if there is no specification item.

Stainless Steel Case Ultra Vibration-proof Glycerin Bath Type Thermometers

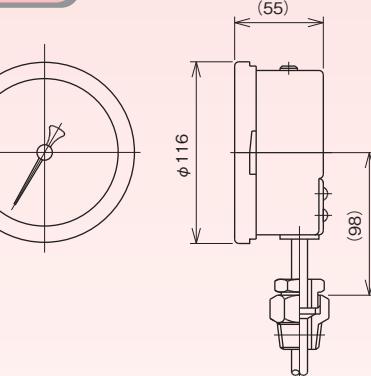

<Direct I type>

RV14

Liquid filled dial thermometer

Dimensions

Model	Dial size
RV14	100

This product has improved the durability by reducing the wear, suppression of amplitude and violent vibration by back pressure which is immersed in a glycerin bath completely the case internal mechanism, caused by the viscous drag of glycerin.

Resistance of atmosphere is good in made "SUS304" case, the filling liquid is using glycerin aqueous solution.

Specifications

Item		Description		
Manufacturing range		-70~150°C		
Case		Construction: Spray-proof / equivalent to IP65, Material: SUS304, Finish: Plain		
Wetted parts material		Bulb: SUS304, Connection / Flange: SUS304		
Accuracy	Indication error	Within ±2% F.S. at room temperature (20°C)		
	Ambient temperature	Within ± 2 %F.S./15°C		
Compensation		Bimetal compensation		
Connection		R½, R¾, ½NPT, G½B, G¾B ½ is not available with φ16 bulb and φ19, φ23 thermowell.		
Flange		JIS10K20ARF, JIS10K25ARF, ANSI1B150RF, ANSI1B300RF		
Connection	Without themowell	Union type		Slide type is not available.
	With themowell	Double socket union type: R½, ½NPT (Connection)

- The above lengths are the minimum necessary of the bulb to be inserted into the fluid to be measured.
- Bulb length should be over the above length and specified in 5mm steps.

The above minimum insertion length is the length without thermowell.

With thermowell, 25mm is added to the above length.

The minimum length of the plain type bulb is the minimum length of the above table plus 40mm.

【Manufacturing range】

- Slide type is not available when the following conditions are true.
- ①Bulb: ϕ 16
- ②When the maximum temperature of temperature range exceeds 400°C.

*When ordering, please specify the bulb length and lead length.

*The thermowell model composition is SW ⑬ ⑭.

*For with thermowell, please refer to P ⑯ ~thermowell manufacturing specifications and specify the SW model also.

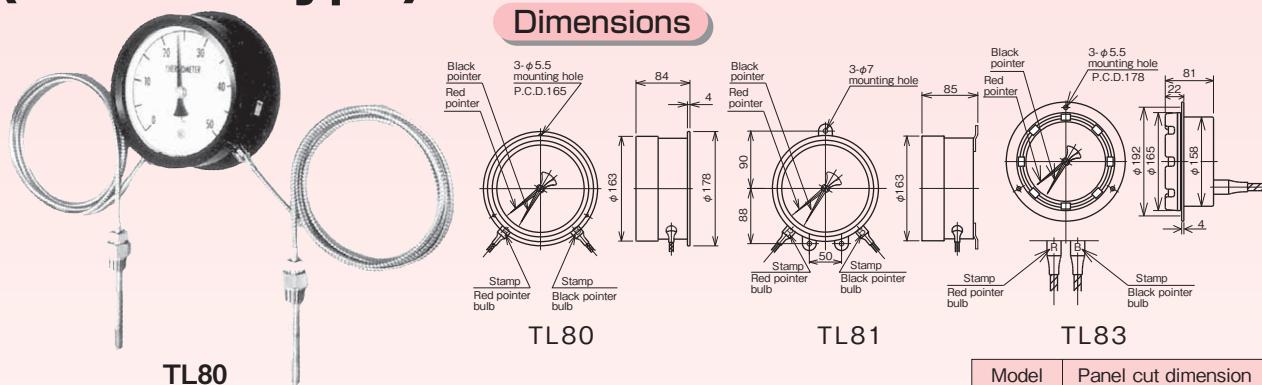

*Specify "X" if there is no specification item.

Duplex Thermometers

<Remote type>

TL80・81・83

Liquid filled dial thermometer

Duplex thermometers are thermometers which indicate the temperature of two points on the same scale. This is effective when you want to compare the temperature of two points and when there is not enough space to mount two thermometers.

For Temperature Gauges

SW Thermo-well

When measuring temperature object flows, and the speed is fast, and the pressure is high, the same as general temperature indication indicator, thermo-well (well) is necessary to temperature sensor department of temperature gauge. And, in general application, it uses protecting tube to be easy maintenance.

As a condition of protecting tube

- 1) Standing temperature, the pressure that is going to be measured (it contains a flow) fully.
- 2) Not raising corrosion, other chemical reaction by measuring temperature object.
- 3) With Leakage.
- 4) It isn't damaged even if receives sudden temperature change.
- 5) It stands mechanical power such as vibration, a shock enough.
- 6) Thermo-well oneself doesn't occur gas harmful to temperature sensor.
- 7) It informs measuring temperature department of temperature change quickly.

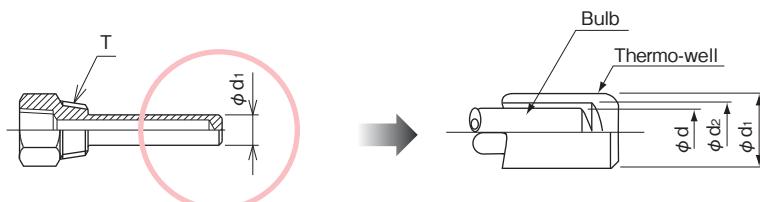

Thermo-well has digging type and welding type, and welding type is standard. And thermo-well a screw type and flange type by installation system.

■ Thermo-well material

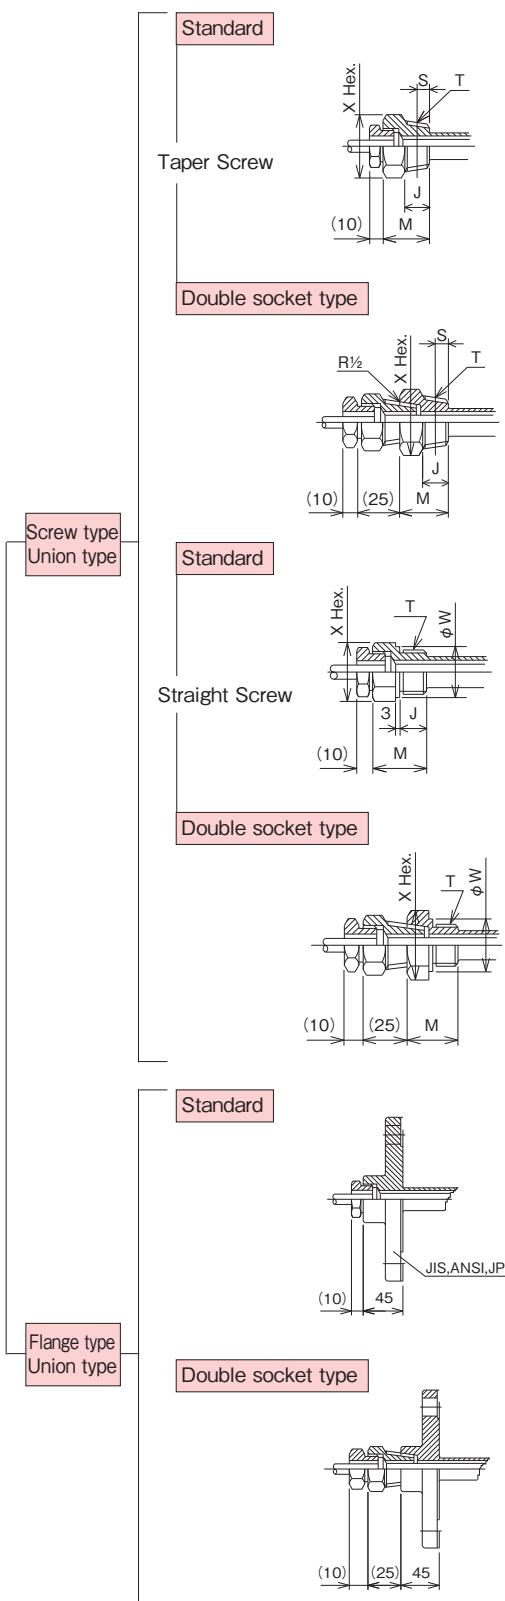

SUS304, SUS316, SUS316L, Titanium, Hastelloy-B[®], and Monel-metal[®] are available.

Teflon[®] or Glass etc. coating is available.

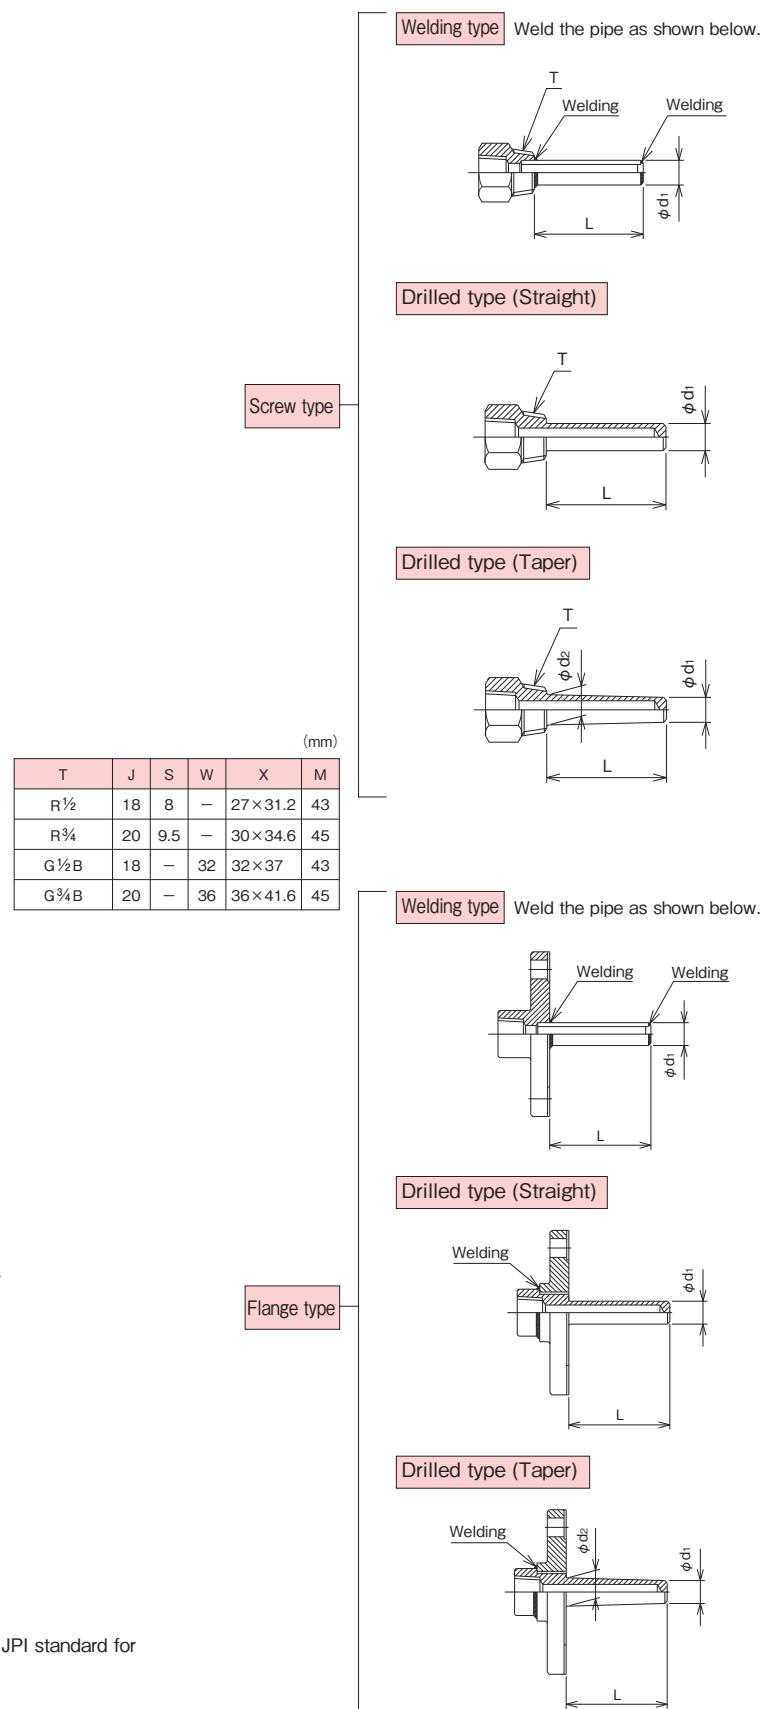

Coated thermo-well is available with flange type only.

Specifications

■ Connection parts and dimensions

■ Thermo-well type and size

Note) Please refer to JIS, ANSI, and JPI standard for flange size.

Welded type**Model number configuration**

Please specify the model number and each specs for ordering.

Model

S W 1	—	①	②	③	—	④	⑤	⑥	⑦	⑧	⑨	⑩	⑪	⑫	⑬	⑭	⑮				
Welded type thermo-well																					
Model number					Selective spec.					Additional spec. (Option)											
Model	0	Welding type straight	For slide type W16 thread 18 (Bulb: ϕ 8), W20 thread 16 (Bulb: ϕ 10), W22 thread 14 (Bulb: ϕ 13)										OM	JIS10K20AFF							
	1	Welding type straight	Inside screws W22 thread 14										ON	JIS10K25AFF							
	2	Welding type straight	Inside screws Rc1/2										OP	ANSI 3/4 150RF							
	3	Welding type straight	Inside screws 1/2NPT										OQ	ANSI 3/4 300RF

	5	F	カ	501 ~ 600		
	6	G	キ	601 ~ 700		
	7	H	ク	701 ~ 800		

* For drilled type, titanium, Hastelloy® and other special materials are also available.
Please specify the material.

- No oil & no water treatment are available.
- Please contact us for JIS10K15A RF/FF.

⑯ Documents	0	Nil
	1	Required (Please specify the desired documents separately.) Submission drawings, mill sheet, strength calculation

【Manufacturing range】

Manufacturing range of connecting screws and well

3/8 : Well outer diameter φ12 drilling only

1/2 : Well outer diameter φ12, φ15

3/4, 1: Well outer diameter φ12, φ15, φ19, φ19/23

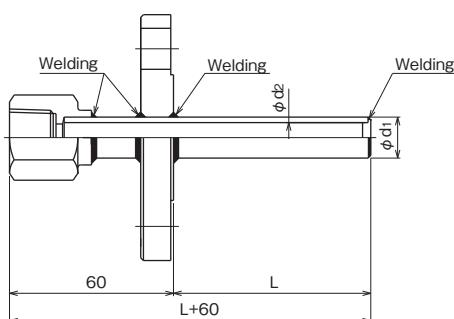

*Specify "X" if there is no specification item.

Welded type, flange general-purpose type

Flange general-purpose type specifications

■ Types and dimensions

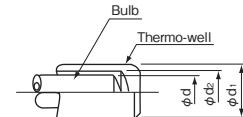

Please weld the pipe and flange the following figure.

■ Relation of thermo-well DIA. and bulb DIA., manufacturing range flange

Outer DIA. (d ₁)	Type	Inner DIA. (d ₂)	Bulb outer DIA. (d)	Flange JIS, ANSI, JPI
φ12	Welded type	φ8.5	φ8	○
φ15		φ11	φ10	○
φ19		φ13.5	φ13	○

Inside screws (Connecting screws with thermometer): W22 thread 14 or Rc1/2

■ Thermo-well material

SUS304

Model number configuration

Please specify the model number and each specs for ordering.
